

Phase II Study results of trabectedin combined with low-dose radiation therapy for Soft Tissue Sarcoma are presented at ESMO

- **The Phase II study has reached its primary endpoint of Overall Response Rate (ORR), with 55.6% of responses.**
- **The study was carried out by Sarcoma Research Groups in Spain, France and Italy, in collaboration with PharmaMar.**

Madrid, September 30th, 2019.- Sarcoma Research Groups in Spain, France and Italy, in collaboration with PharmaMar (MSE:PHM), have presented the results of the metastatic patient group cohort from the single-arm, phase II multicenter study of trabectedin in combination with low-dose radiation therapy for the treatment of Soft Tissue Sarcoma (STS). The results were presented at the European Society of Medical Oncology (ESMO) Congress, which is being held from September 27th to October 1st in Barcelona.

The study, led by Dr. Martín Broto, oncologist at the Virgen del Rocío University Hospital in Seville (Spain), has reached its primary endpoint of Overall Response Rate (ORR), with 55.6% of responses to the treatment.

Trabectedin in combination with a low-dose of radiotherapy has shown relevant activity in a wide range of soft tissue sarcoma types in patients with advanced metastatic disease, giving other therapeutic options for tumor reduction beyond the first line of treatment.

In addition, this combination has shown a significant impact on Progression Free Survival (PFS) and Overall Survival (OS) in patients with advanced disease who have received a median of two previous lines of treatment. The six-month median for PFS was 75%, while the six-month median for OS was reached by 86% of patients.

About PharmaMar

Headquartered in Madrid, PharmaMar is a biopharmaceutical company, focused on oncology and committed to research and development which takes its inspiration from the sea to discover molecules with antitumor activity. It is a company that seeks innovative products to provide healthcare professionals with new tools to treat cancer. Its commitment to patients and to research has made it one of the world leaders in the discovery of antitumor drugs of marine origin.

PharmaMar has a pipeline of drug candidates and a robust R&D oncology program. It develops and commercializes Yondelis® in Europe and has other clinical-stage programs under development for several types of solid cancers: lurbinectedin (PM1183), PM184 and PM14. With subsidiaries in Germany, Italy, France, Switzerland, Belgium, Austria and the United States. PharmaMar wholly owns other companies: GENOMICA, a molecular diagnostics company; Sylentis, dedicated to researching therapeutic applications of gene silencing (RNAi). To learn more about PharmaMar, please visit us at www.pharmamar.com.

About Yondelis®

Yondelis® (trabectedin) is a novel, synthetically produced antitumor agent originally isolated from *Ecteinascidia turbinata*, a type of sea squirt. Yondelis® exerts its anticancer effects primarily by inhibiting active transcription, a type of gene expression on which proliferating cancer cells are particularly dependent.
